

## WARNING

**Be sure to read this user's manual thoroughly before use, and follow the instructions that it contains. This is critical for your safety, and will also prevent premature product failure due to incorrect use or installation.**

### BOX CONTENTS

The box contains a Hub with two side bolts.

### TOOLS REQUIRED

8mm Allen key or 17 mm flat wrench.

### IMPORTANT SAFETY INFORMATION

Check that the wheels are fastened securely before riding the bicycle. If the wheels are loose in any way, they may come off the bicycle and serious injury may result.

Products are not guaranteed against natural wear and deterioration from normal use and aging. The maximum total weight all loaded (rider + clothing + protective gear + backpack, luggage etc.) is 100 kg.

### INSTALLATION

**Have a professional bicycle mechanic build your wheel correctly.  
Do not use a radial lacing pattern as it may damage your hubs.  
Radial lacing will void your warranty and may cause serious injury or death!**

To mount the wheel in the fork, turn the bolts until there is enough space for the fork blades to properly engage with the hub cones. Next, tighten the side bolts with 25 Nm of torque.

### MAINTENANCE

The bearings should be lubricated about once a year.
